Summary

Computer Science undergraduate with hands-on experience building full-stack web applications and computer vision systems. Comfortable working across the stack, from designing responsive UIs with React and Tailwind CSS to building FastAPI/Django backends and real-time object detection pipelines with YOLOv8. Eager to apply strong fundamentals in software development to real-world engineering challenges.

Education

B. M. S. College of Engineering, Bangalore **2024 - 2028**
B.Tech in Computer Science & Engineering *8.56/10 CGPA*

Work Experience

Avitech Engineering and Trading **May 2026 – Present**
Software Development Intern *India*

- Engineered an internal **contract and tender management platform** to centralize tracking of active contracts, submission deadlines, operational locations, and associated records across 4+ business units.
- Architected **RESTful APIs using Java and Spring Boot**, integrating **MySQL** for persistent storage and structured data management, cutting contract lookup time by 40%.
- Delivered a responsive **React.js** dashboard with search, filtering, and status-based views to monitor active, upcoming, and completed contracts through a unified interface.
- Automated **role-based authentication and deadline tracking**, eliminating reliance on manually maintained spreadsheets for a team of 25+ users.

Projects

RepoTrust | *React, TypeScript, Tailwind CSS, Django* [Source Code](#)

- Developed a trust and moderation dashboard for AI models that tracks trust metrics, user interaction data, flag histories, and reviews across 4+ LLMs (GPT-4o, Claude 3.5, Gemini Ultra, and others).
- Implemented the frontend using **React (Vite) + TypeScript**, styled with **Tailwind CSS** and **ShadCN** UI components, with client-side routing via **React Router**.
- Built trust score and capability visualizations, moderation history views, and per-model usage statistics dashboards.
- Integrated 5 independently hosted **Django** chatbot backends, each accessible via a one-click "Launch Chat" interface from the dashboard.

Intelligent Traffic Violation Analytics System | *YOLOv8, OpenCV, FastAPI, SQLAlchemy* [Source Code](#)

- Created an end-to-end computer vision system that detects traffic violations (wrong-lane driving, red-light violations, triple riding) in real time from video feeds, processing at 30 FPS.
- Applied **YOLOv8** and **ByteTrack** for object detection and tracking, using trajectory-vector analysis and IoU-based overlap detection to flag violations with 90%+ accuracy.
- Designed an asynchronous **FastAPI** REST layer backed by **SQLAlchemy**/SQLite to persist violation data, plus a video-upload endpoint that spawns isolated tracking pipelines.
- Deployed a live-polling web dashboard to stream violation logs and analytics to administrative stakeholders in real time.

Campus Lost & Found – Smart Item Recovery | *YOLOv8, Streamlit, OpenCV* [Source Code](#)

- Launched a computer-vision-powered lost-and-found platform that auto-tags uploaded item photos using **YOLOv8** object detection across 80 object categories, replacing manual, inconsistent text descriptions.
- Configured a **Streamlit** interface with adjustable detection-confidence thresholds and multi-filter search by keyword, category, and confidence.
- Established **SQLite**-based persistent storage and wrote CLI utilities for database inspection, stats, and resets.

Technical Skills

Languages: Python, Java, C++, JavaScript, TypeScript

Frontend: React, Vite, TailwindCSS, ShadCN, Streamlit, HTML, CSS

Backend: Java (Spring Boot), FastAPI, Django, Node.js, Express.js

Computer Vision: YOLOv8, OpenCV, ByteTrack

Databases: MySQL, SQLite, PostgreSQL, MongoDB

Developer Tools: Git, GitHub, VS Code, Postman
